

Science in the Gardens is a new initiative under science.0X to reach out to members of the public to promote and interest them in science. Organised for the first time, the event was well-received by members of the public who were pleasantly surprised by the fun and joy of participating in our activities and science shows while taking a morning stroll in the gardens or sipping tea during their breakfast amidst the serenity and beauty of the botanic gardens.

Here are some pictorial moments!

A young participant seen here, growing his own *Beanie Garden*!

Despite the early morning rain, more than 300 people join us for a 3-hour morning of fun-science!

Scented Doll for mummy?

Paper craft of forest insects and animals for the young ones.

Puzzles are fun butI need help in cracking them!

Parents join their kids in the activities.

Young botanists in the making!

Well, let's play some games and win some prizes!

The science show by Dr David Willey was a blast for the kids!

Science make things look like magic! See how liquid nitrogen can make the balloon shrink and then expand quickly!

Dr Willey plays Mother Nature in creating a “cloudy” moment with liquid nitrogen!
